

Guided Task 11: Testing

Objective

In this guided task, you'll:

- Write tests that assert whether a list of integers and strings work with a given function
- Write tests for three given Python files

Duration: 90 minutes

Instructions

```
def count(sequence, item):  
    sum = 0  
    for n in sequence:  
        if n == item:  
            sum += 1  
    return sum
```

1. Write two tests that assert whether a list of integers and strings work with this function.
2. Write tests for the three Python files that you can find at this link. [View](#)

Well done, you've completed this guided task!
